

GIS in Archaeology

02 - Working with QGIS

Martin Hinz

Institut für Archäologische Wissenschaften, Universität Bern

23/09/20

Let's Get Started

1. [Click this link](#) and download the file to your desktop
2. Unzip the file
3. [Click this link](#) and download the other file also to your desktop
4. Open QGIS

Layers

**Layers
(Vector Data)**

**Basemap
(Raster Data)**

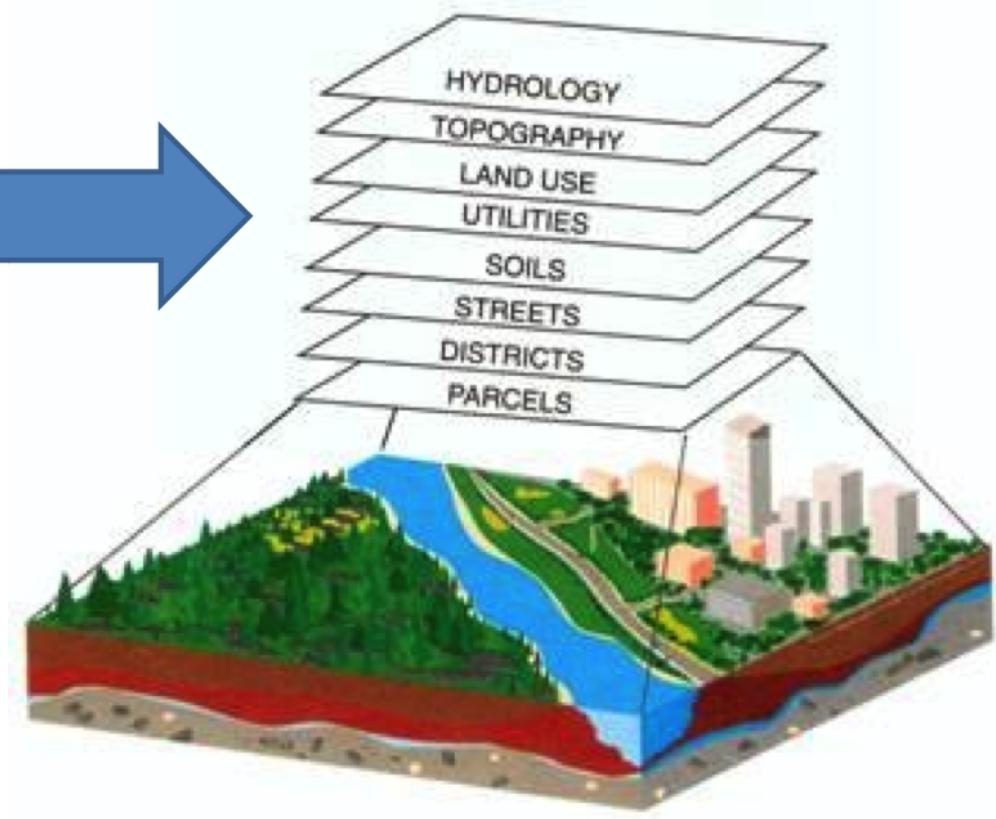

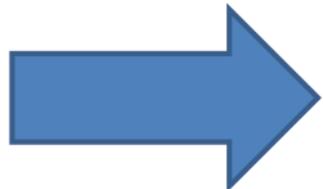

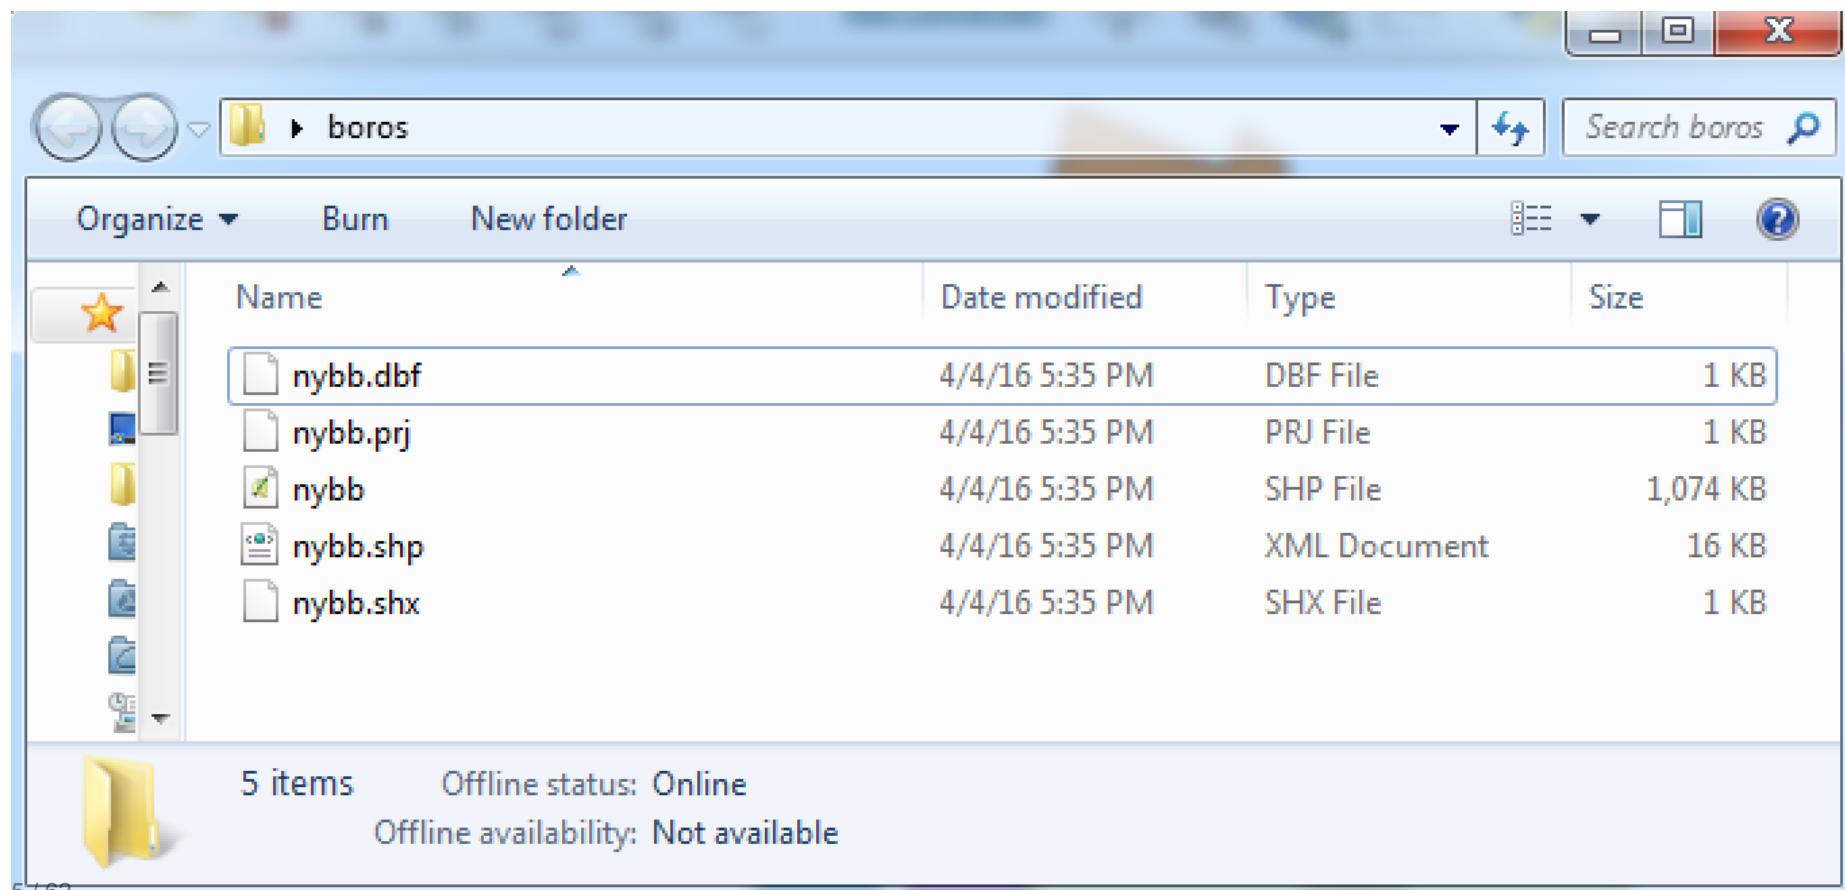

Image Source: <http://www.geocontrolling.com/co-je-gis.htm>

Layer Ordering

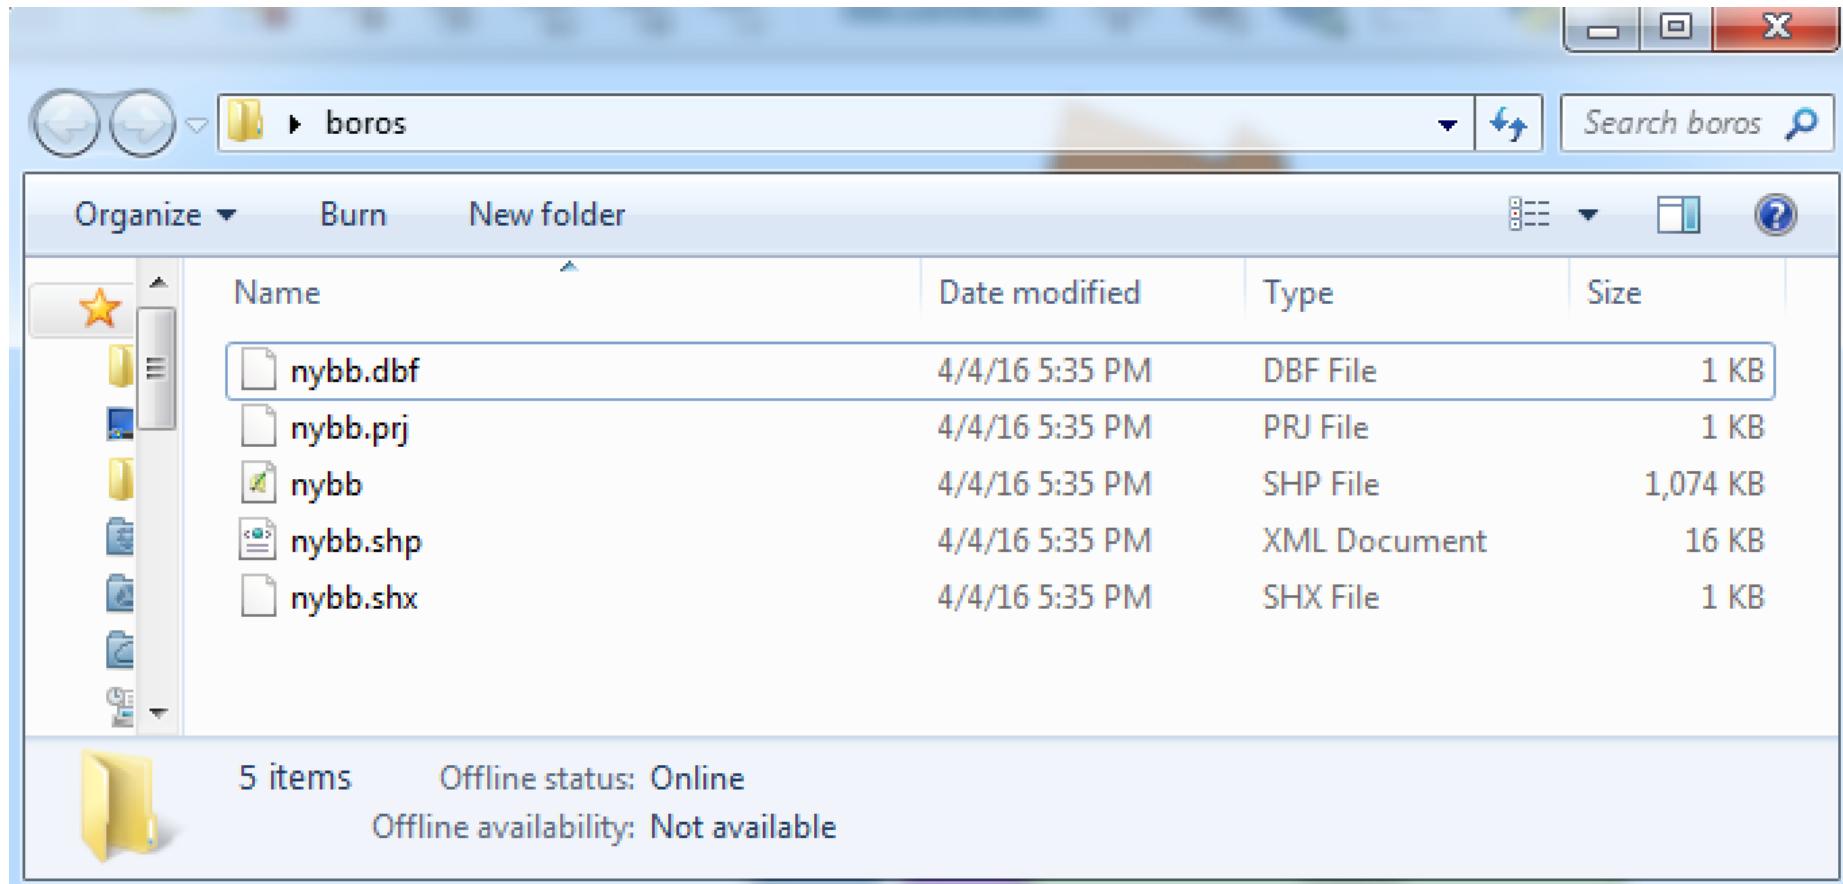

- Layers on top are drawn on top
- Just drag and drop within the Layers Panel to change order
- Try it now

Shapefiles

- Basic file for storing map elements
- Stores spatial data, like points, lines, and polygons
- Multiple files comprise a "shapefile"

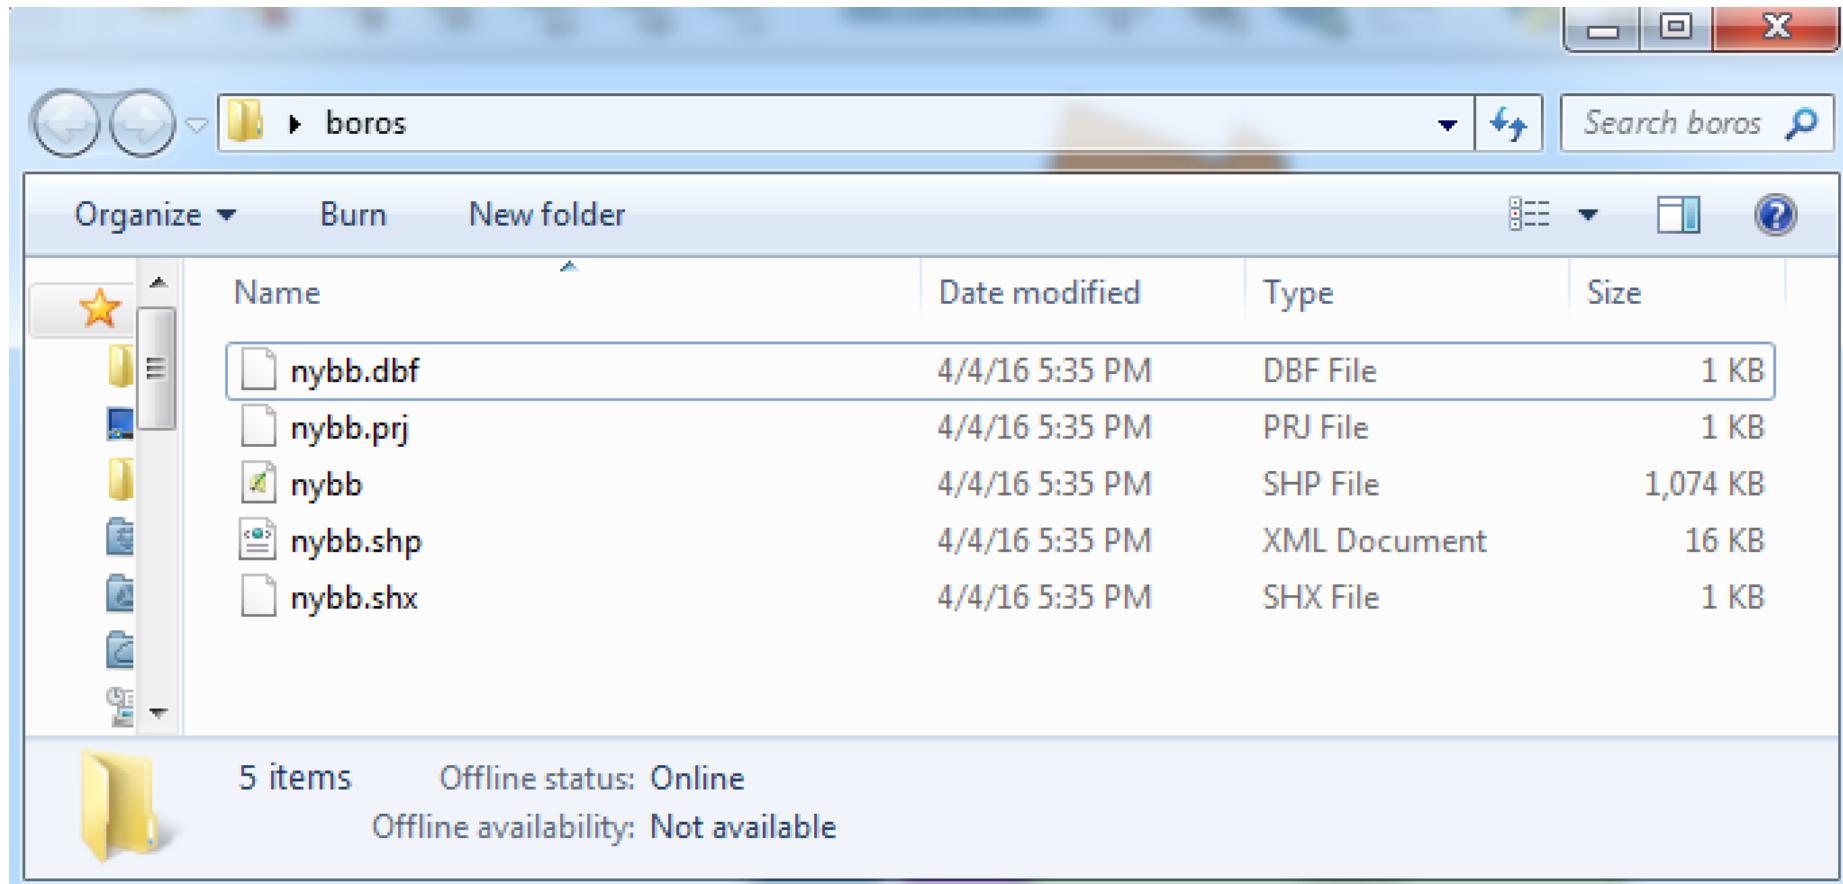

Shapefiles

- **.shp**—The main file that stores the feature geometry
- **.dbf**—The dBASE table that stores the attribute information of features

Shapefiles

- **.prj**—The file that stores the coordinate system information
- **.shx**—The index file that stores the index of the feature geometry

You might also see

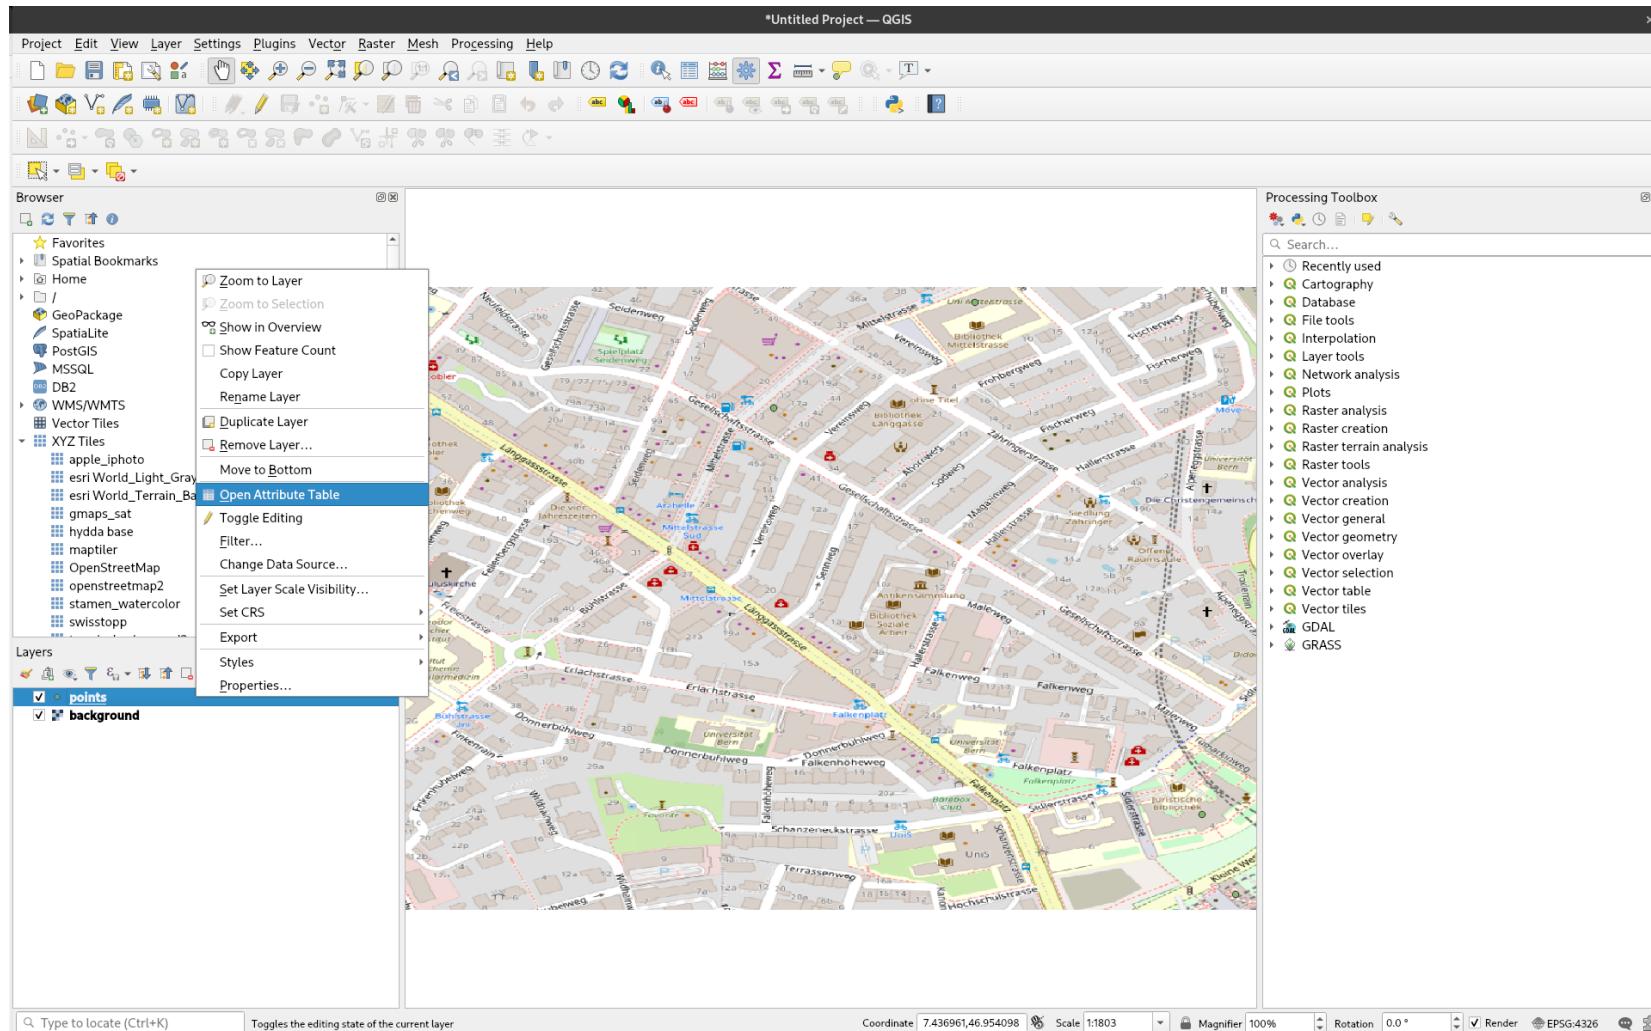

- .cpg—Identifies the character set to be used
- .sbn and .sbx—The files that store the spatial index of the features

Shapefiles

- Have a few limitations
- One geometry type (Point, Line, Polygon) per shapefile
- So sometimes you end up with this:

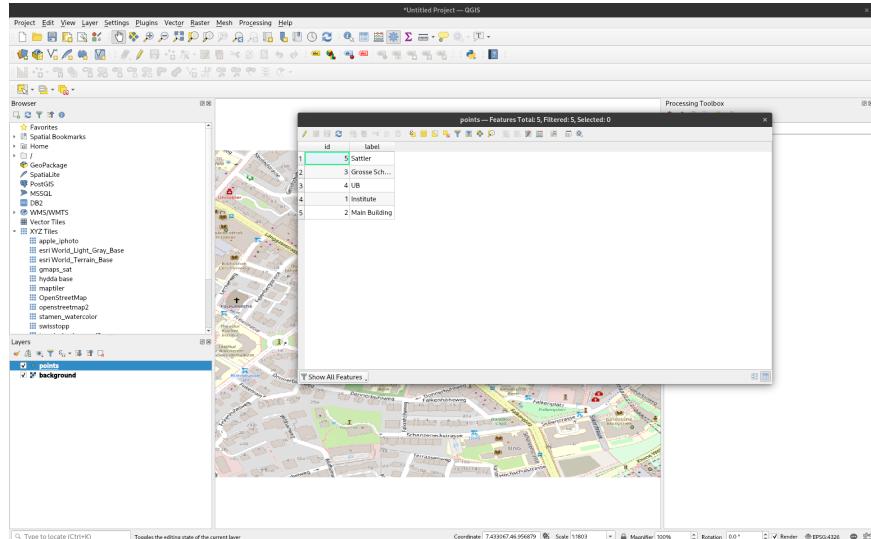

Name		Size	Type	Modified
osm_line.dbf		24.7 MB	Document	Feb 4
osm_line.prj		143 bytes	Unknown	Feb 4
osm_line.shp		1.5 MB	Unknown	Feb 4
osm_line.shx		37.1 kB	Unknown	Feb 4
osm_point.dbf		4.8 MB	Document	Feb 4
osm_point.prj		143 bytes	Unknown	Feb 4
osm_point.shp		24.9 kB	Unknown	Feb 4
osm_point.shx		7.2 kB	Unknown	Feb 4
osm_polygon.dbf		939.4 kB	Document	Feb 4
osm_polygon.prj		143 bytes	Unknown	Feb 4
osm_polygon.shp		4.6 MB	Unknown	Feb 4
osm_polygon.shx		1.5 kB	Unknown	Feb 4

Attribute Table (Right click on layer)

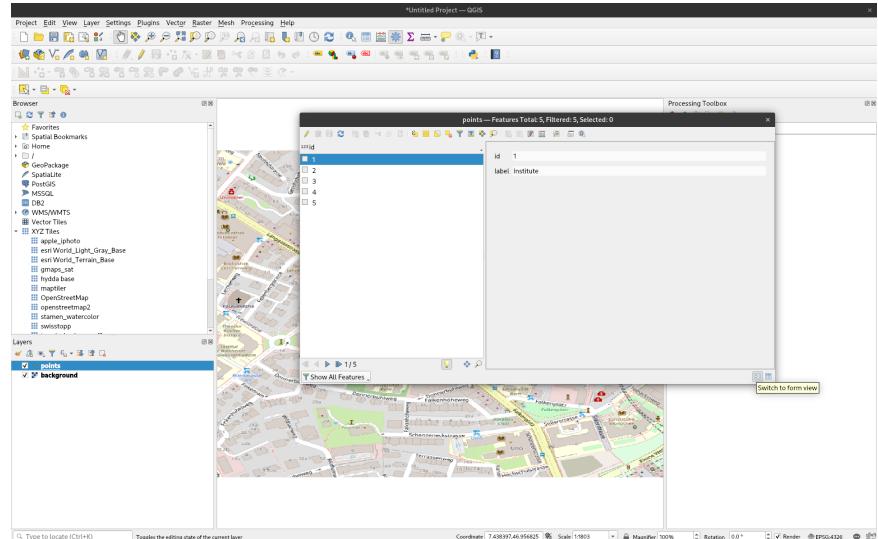

Attribute Table

Table View

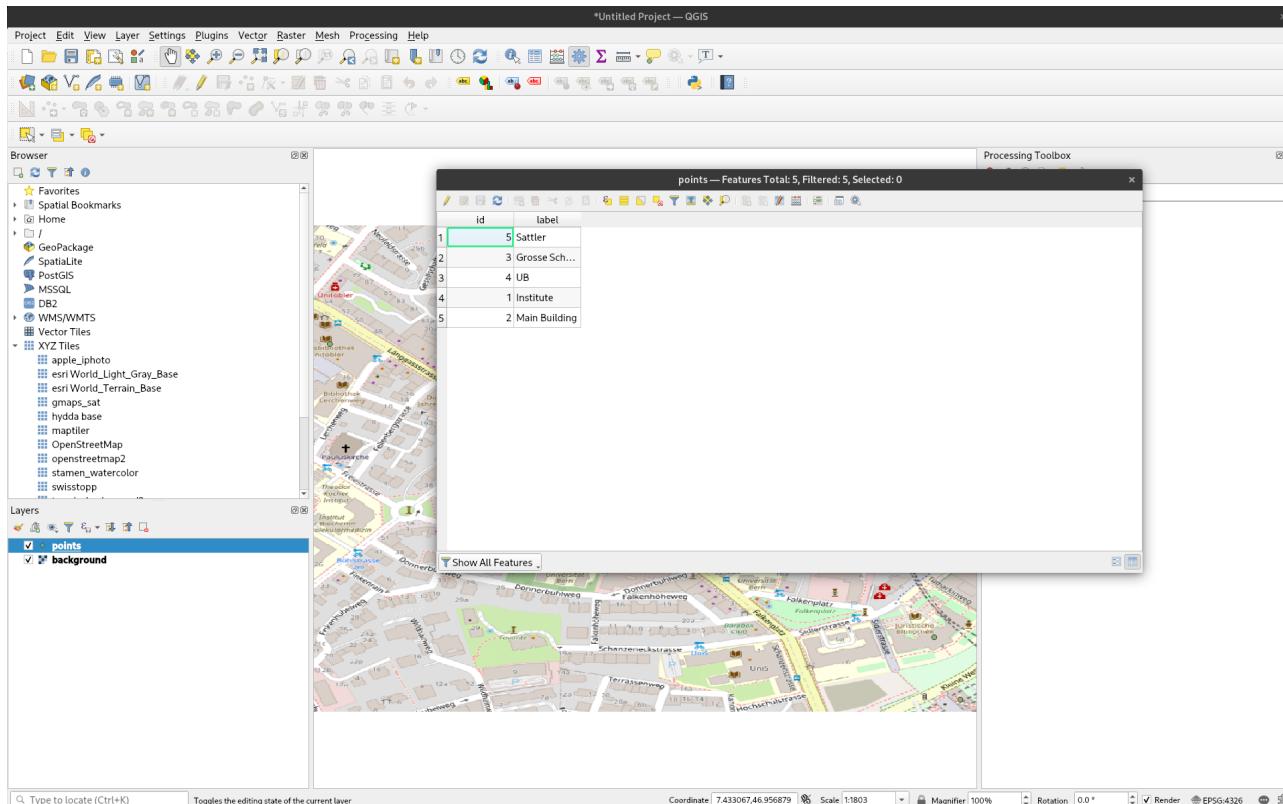

Form View

Shapefiles and Attribute Tables

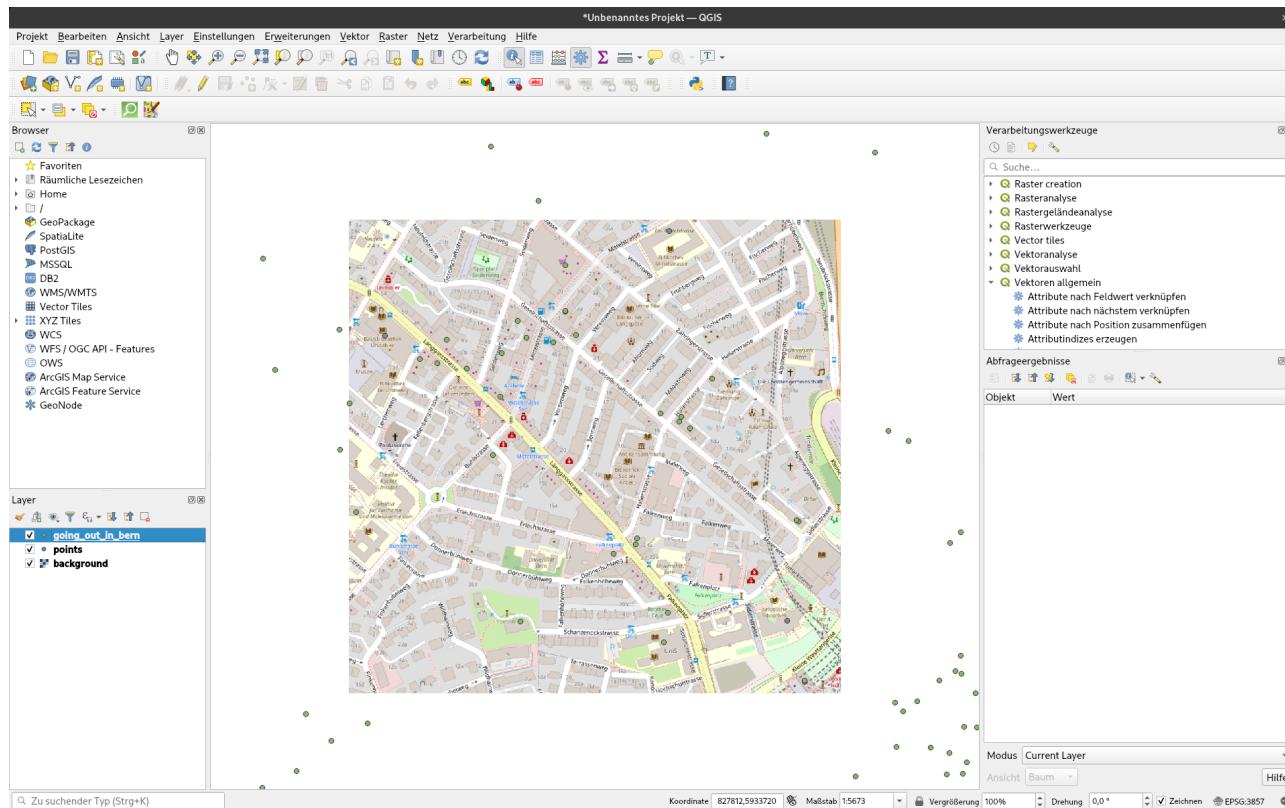

- Column names can only be letters, numbers, and underscores "_"
- Column names can only be ten characters long

Let's add another layer

Going out in Bern

- Download the data to your desktop
- Unzip the file
- Open in QGIS

Going out in Bern

All Objekte anzeigen

Filter and Query

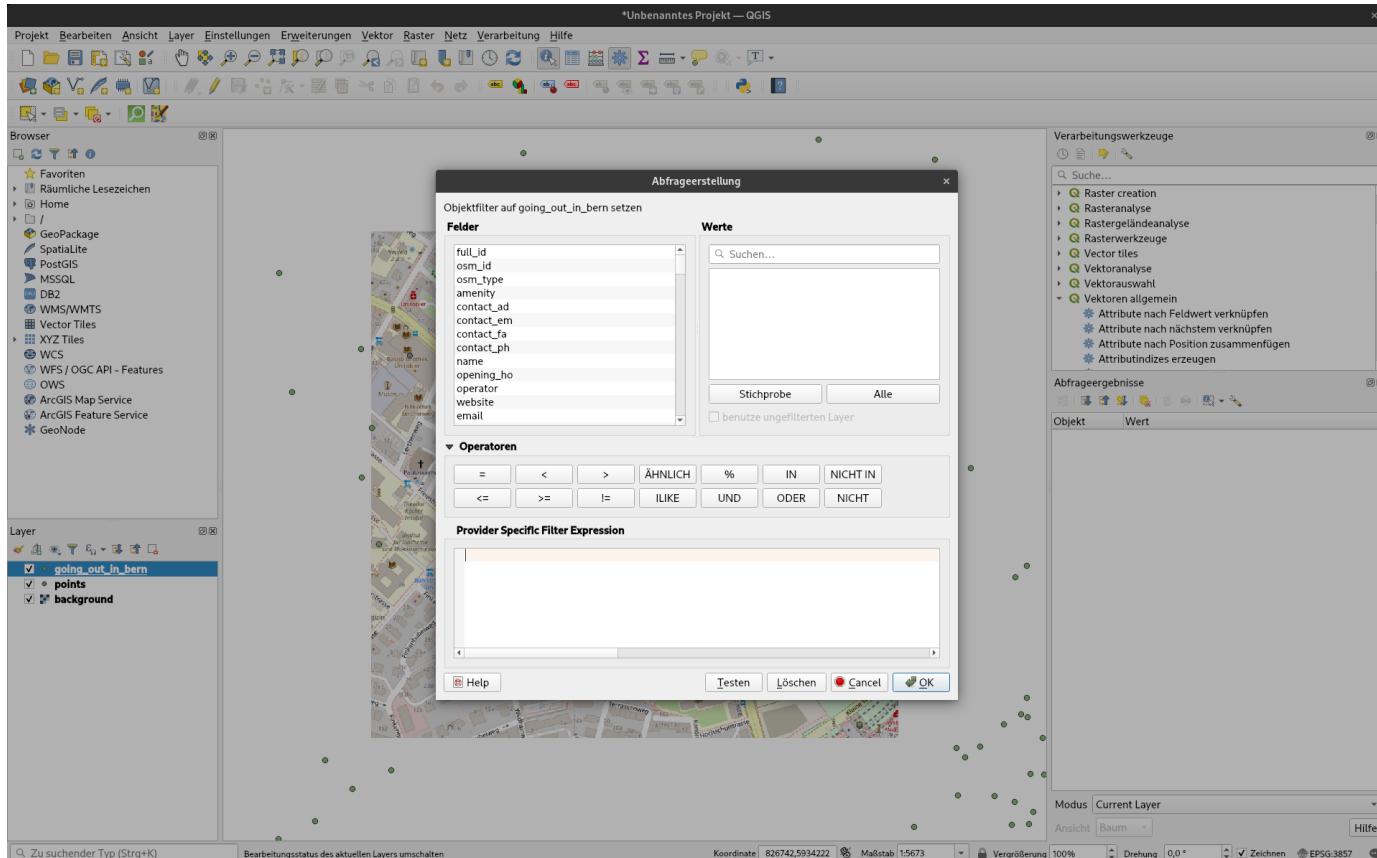

- We can filter the points based on the values in the attribute table

Filter and Query

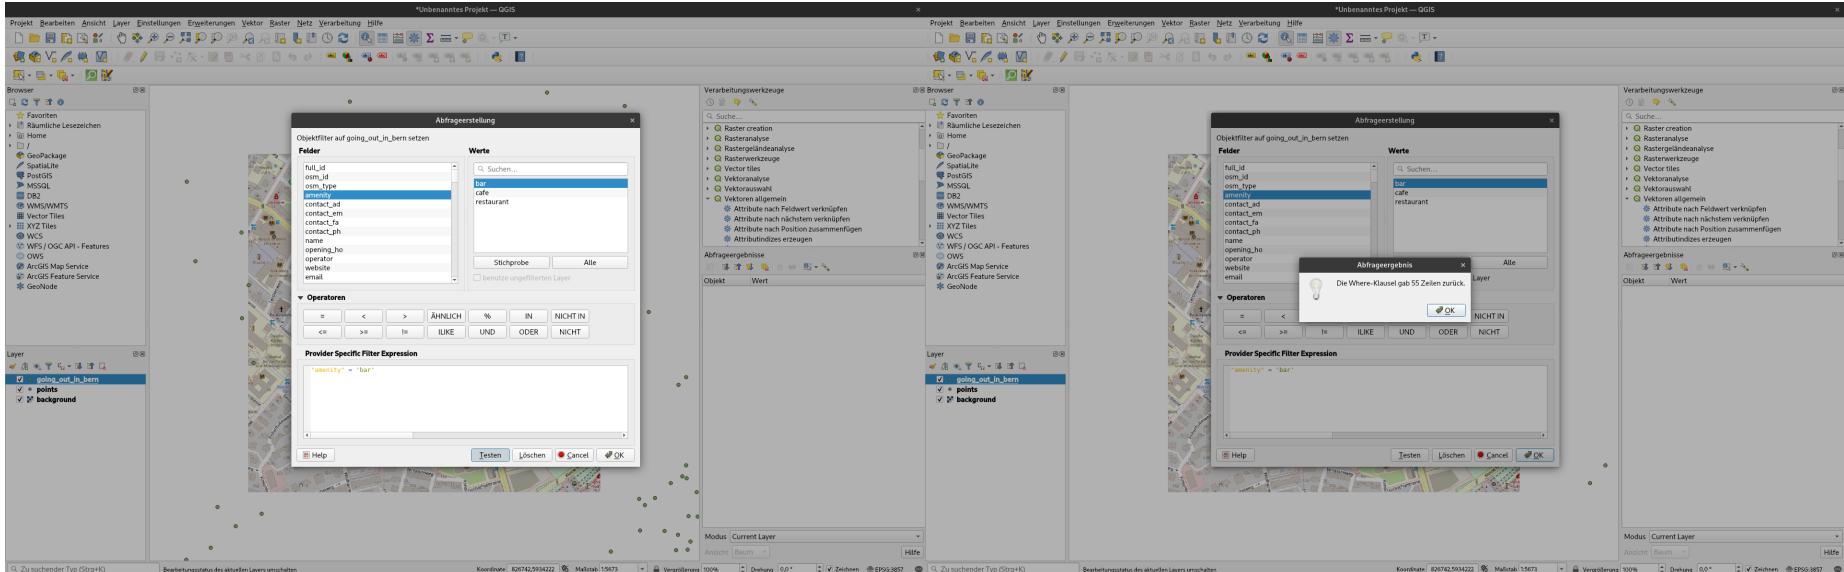

- Right-click on the layer and select "Filter" to open the Query Builder

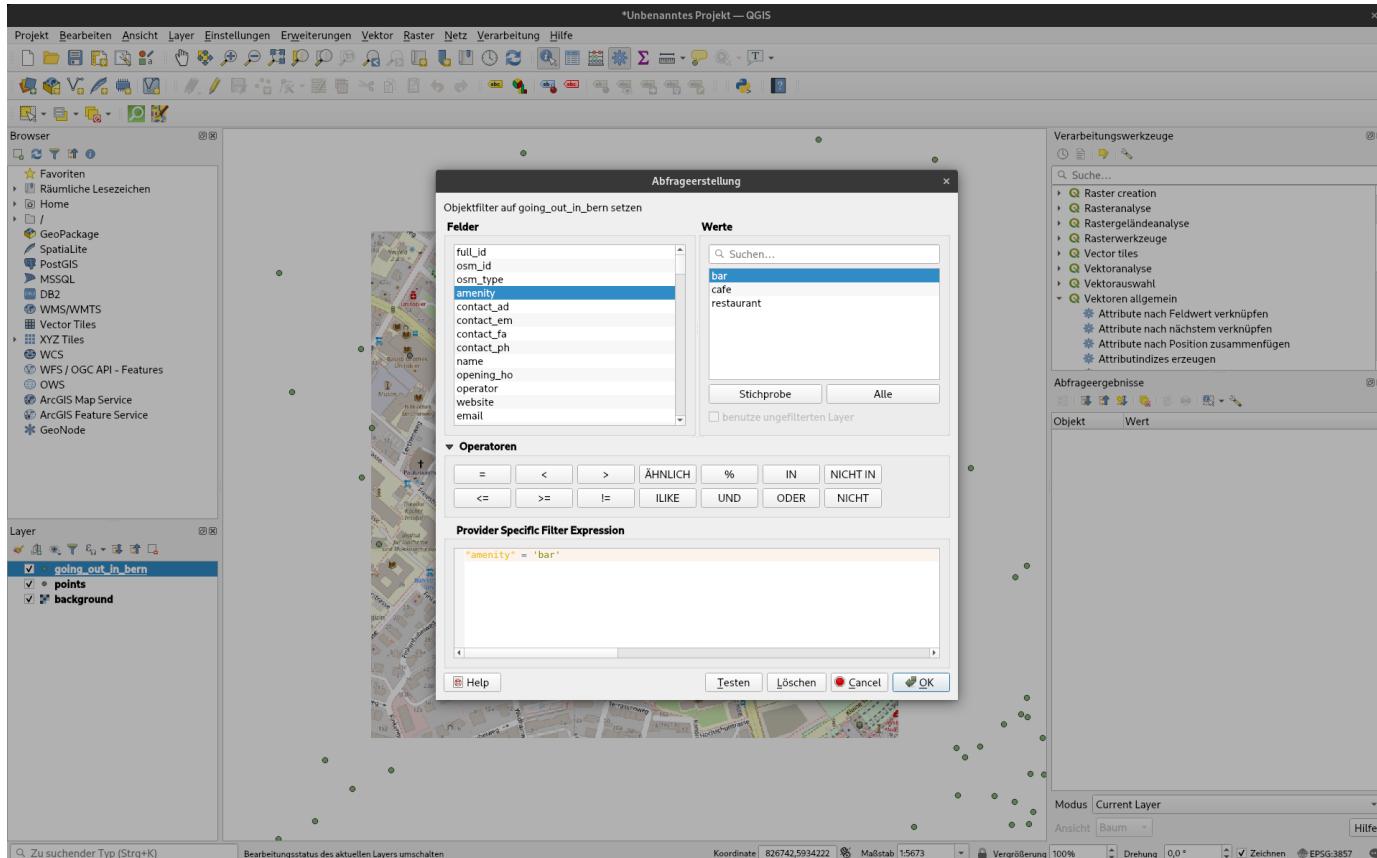

Filter and Query

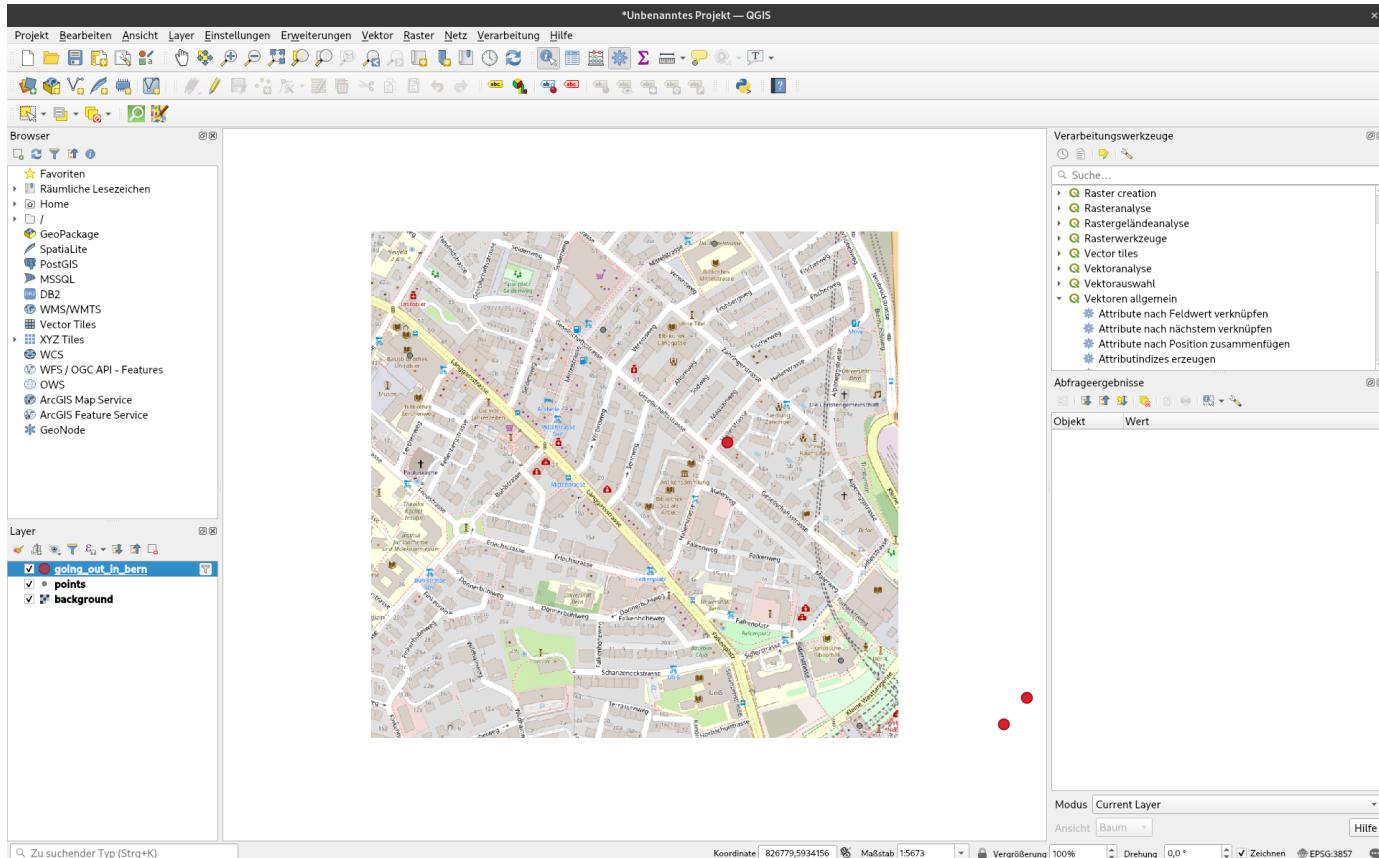

Filter and Query

Filter and Query

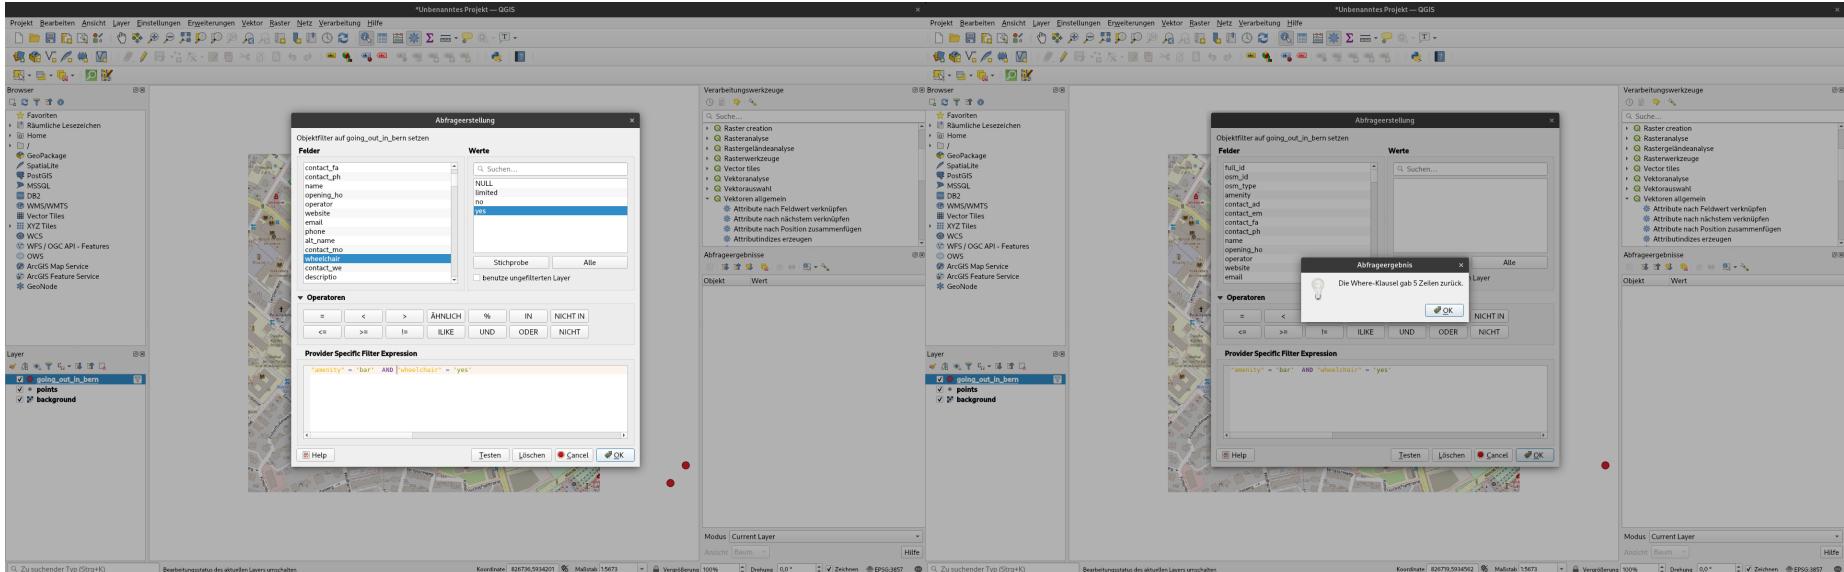

Filter and Query

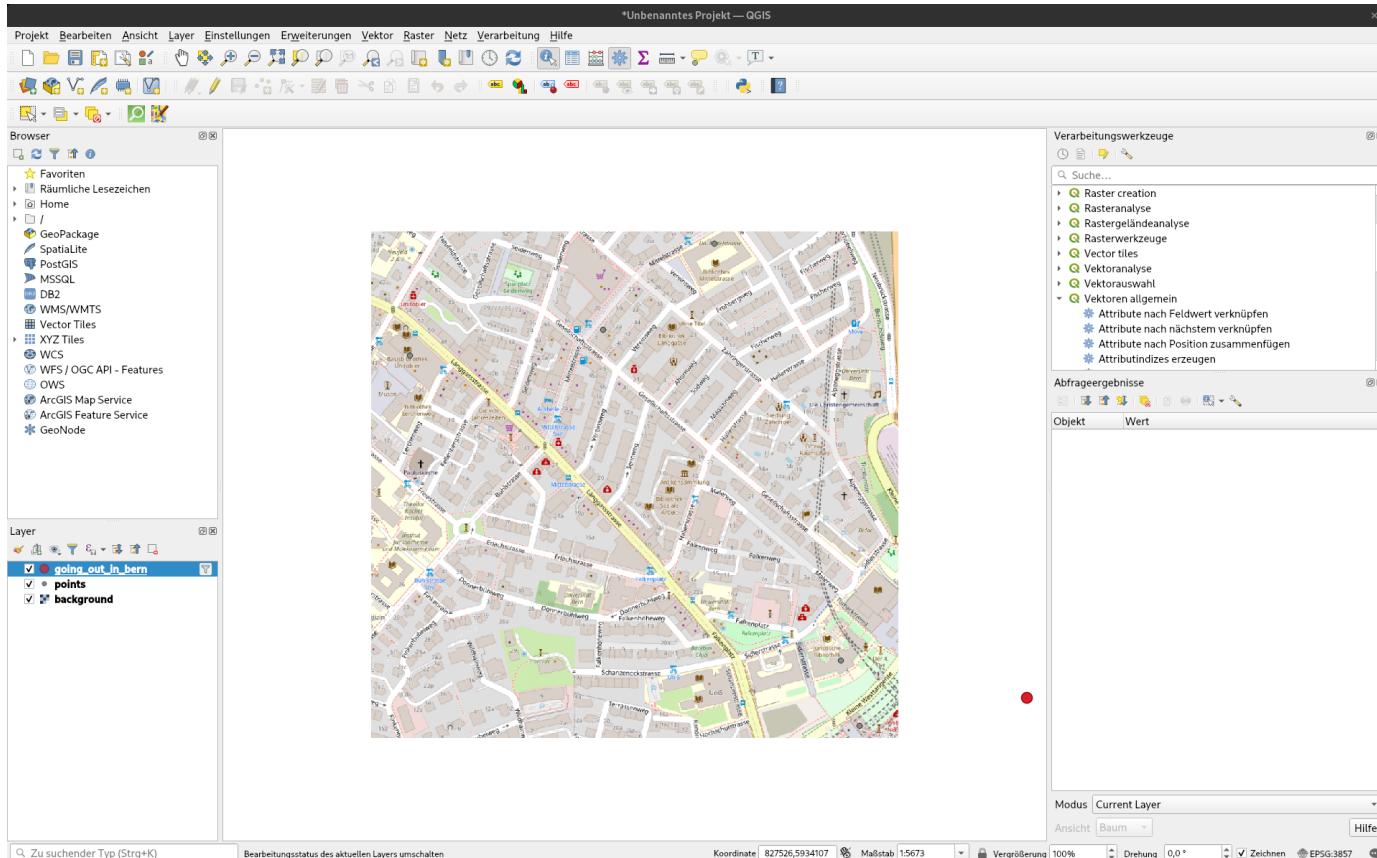

We can also filter by multiple conditions

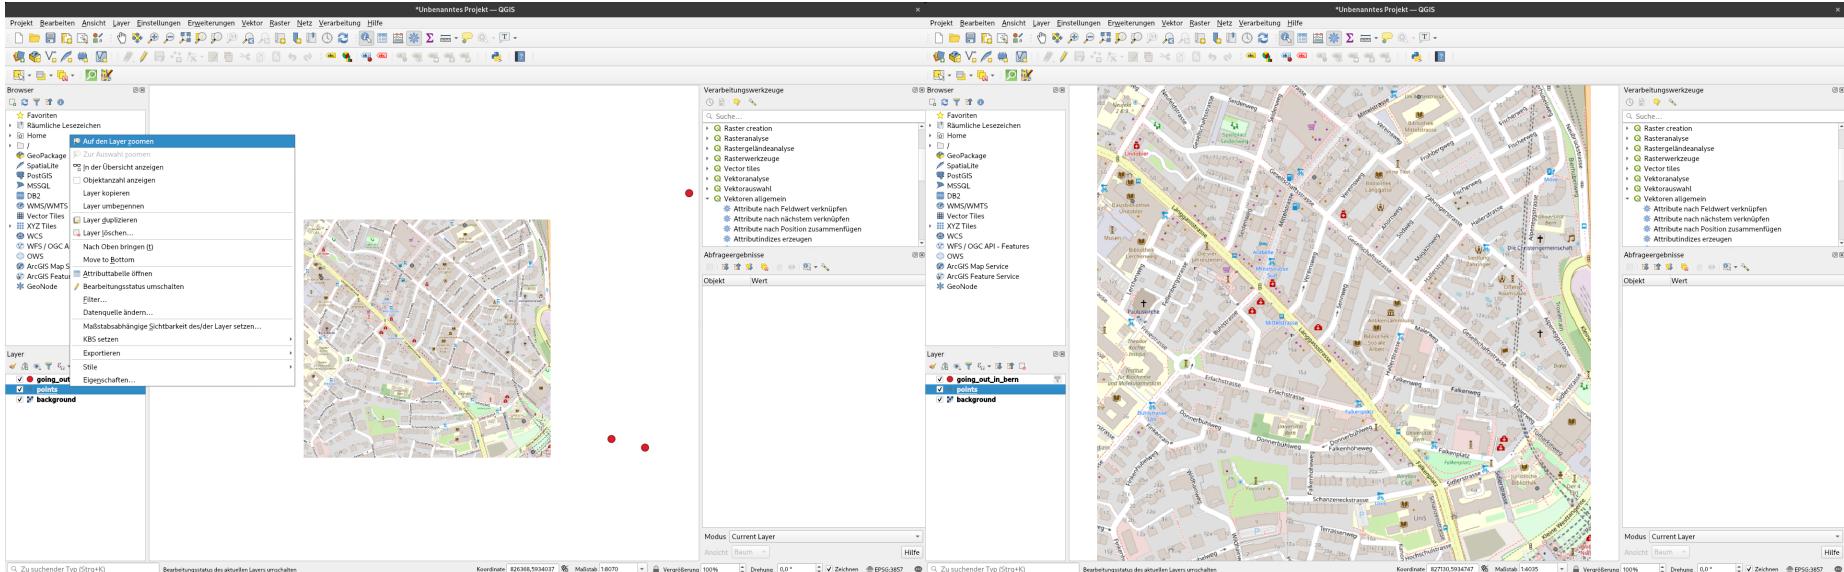

Filter and Query - Multiple Conditions

Filter and Query - Multiple Conditions

Zoom to Layer

Zoom Selection

- Select the zoom on the toolbar

- Draw a box around the area you want to zoom into
- Click the icon to return to the previous map extent

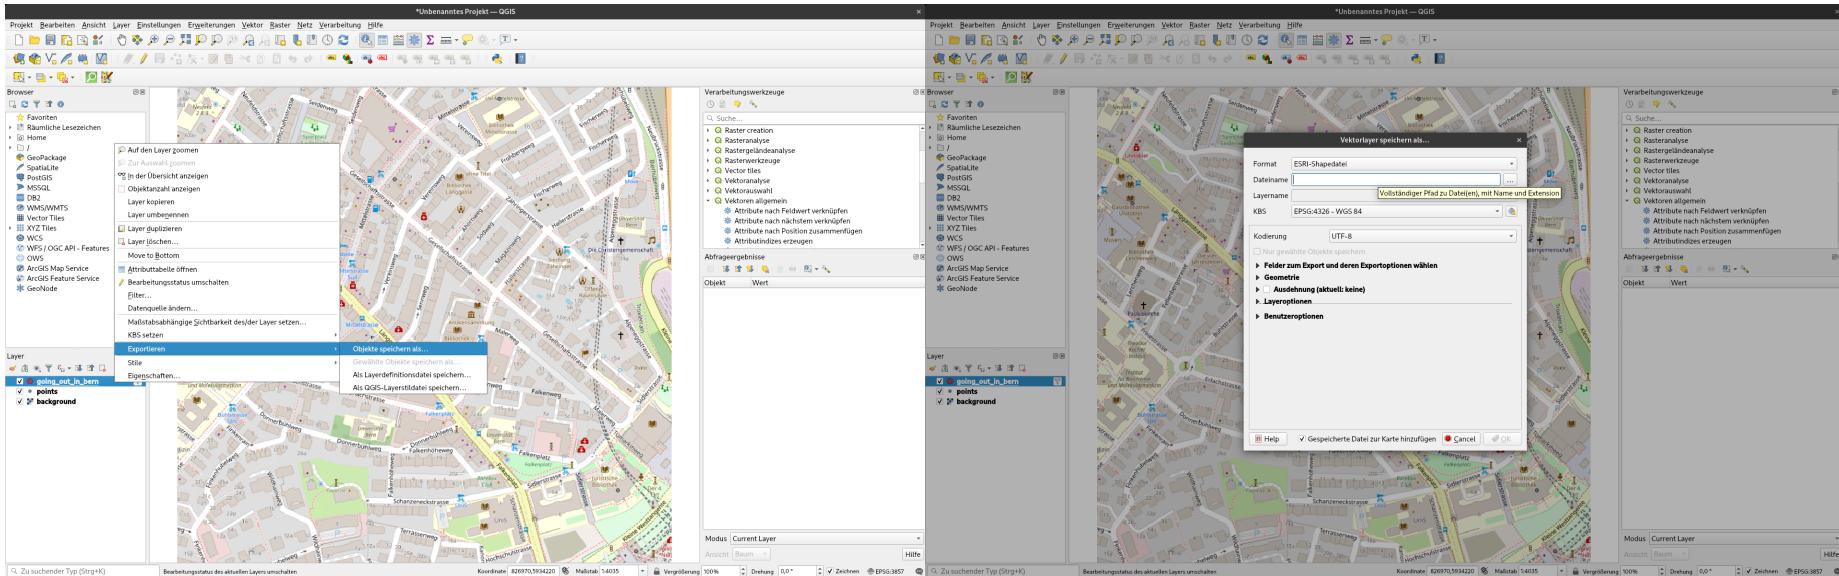

Pan Map

- Select the hand tool to pan around the map

Exporting Data

Your Turn

- Filter according to your own criteria
- Try and find something interesting
- Change the style of the point, either to a different shape, color, or icon
- Export your selection as a new shapefile

CSV-Files

- General (textbased) spreadsheet format
- simple and robust

CSV-Files

- Perfect for data exchange between Spreadsheet (Excel) and GIS

CSV Import - Bicycle Rental

- Download the data to your desktop

The screenshot displays three Microsoft Excel windows side-by-side, illustrating the process of importing a large dataset of bicycle rental locations from a CSV file.

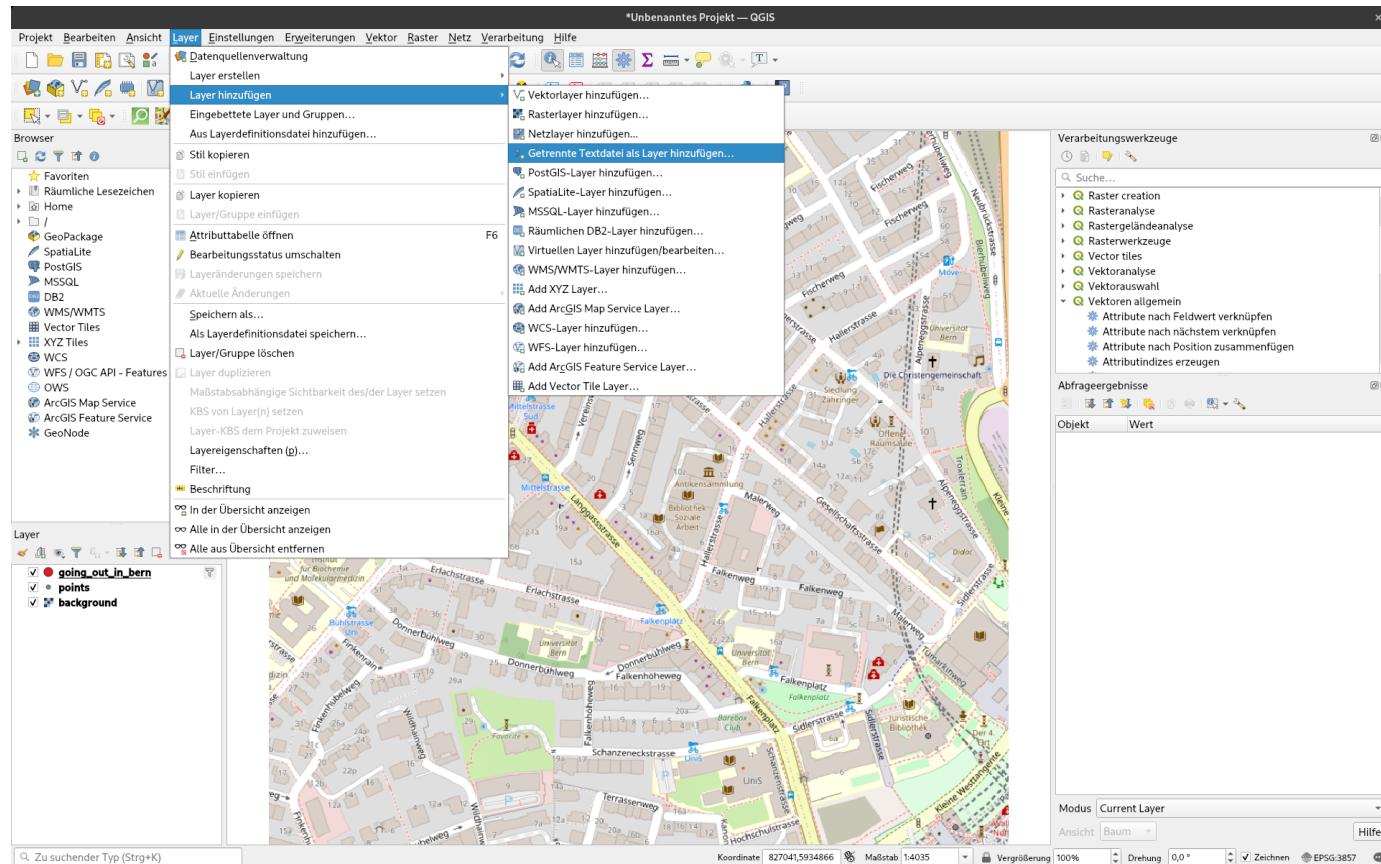

Left Window: Shows the raw CSV data with columns including location ID, location name, address, city, state, and contact information. The data is in a plain text format with commas as delimiters.

Middle Window: Shows the data after it has been imported into an Excel spreadsheet. The columns are labeled A through Z, and the data is organized into rows corresponding to individual locations. The imported data includes columns such as 'operator', 'website', 'opening_hours', and 'description'.

Right Window: Shows the same imported data in a second Excel spreadsheet, likely for further processing or analysis. This window also displays the column headers and the first few rows of the imported data.

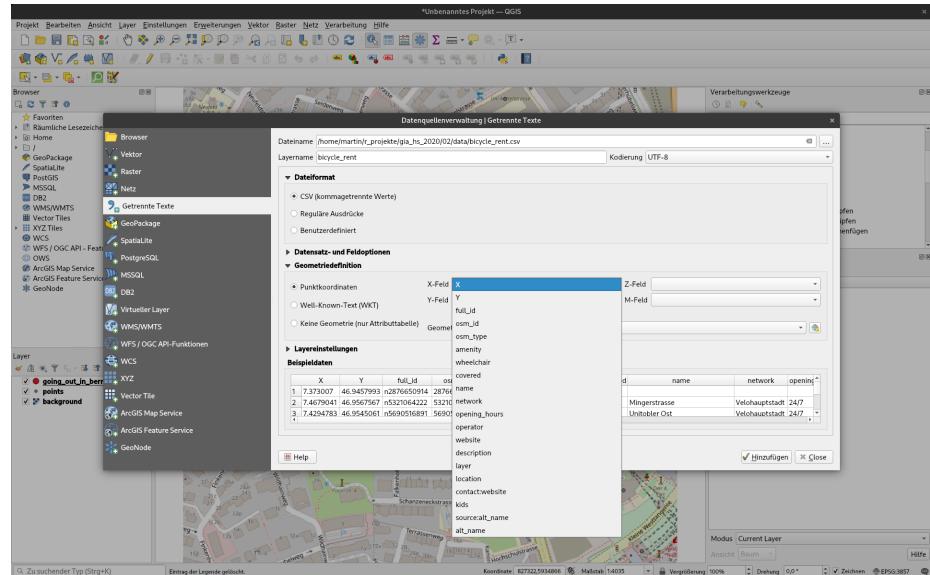

CSV Import - Bicycle Rental

Load Text Layer

CSV Import - Bicycle Rental

Set coordinate columns

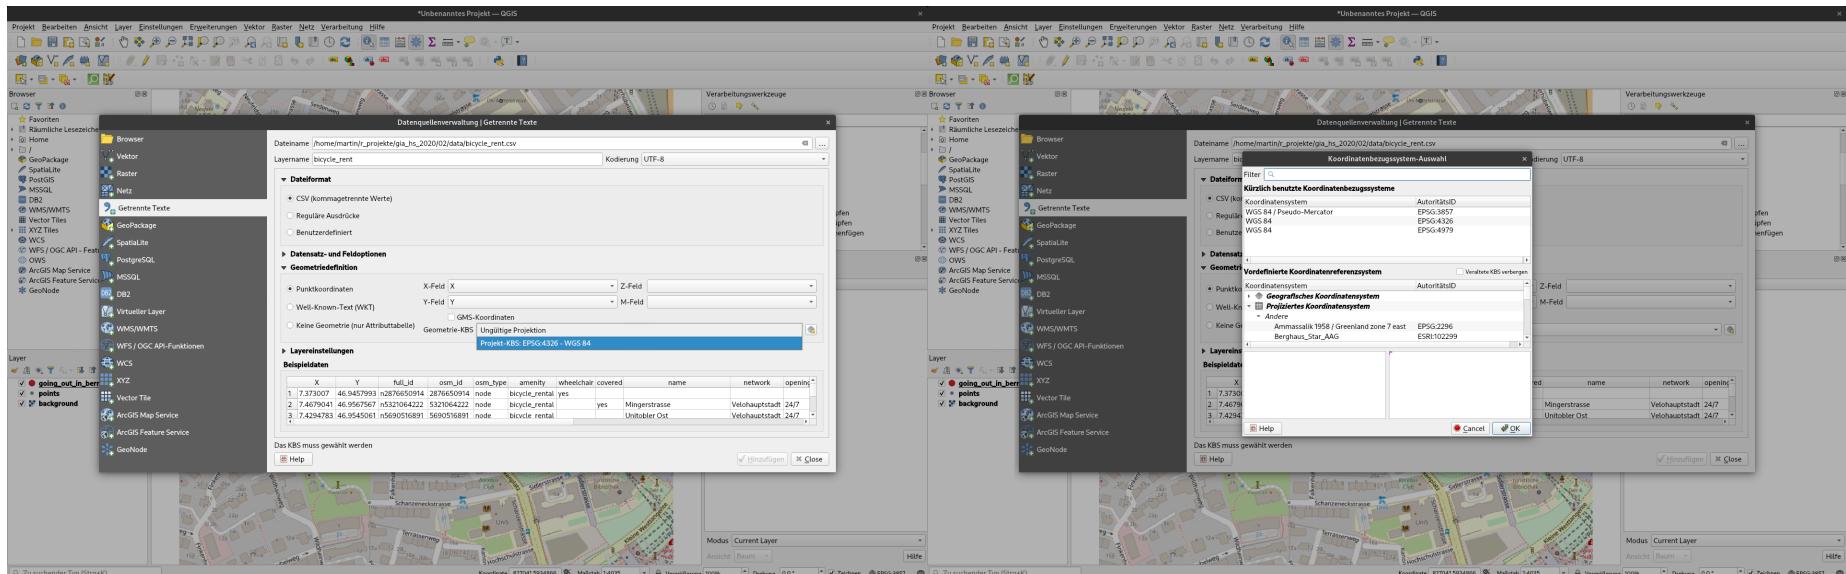

CSV Import - Bicycle Rental

Set coordinate columns

and Coordinate Reference System <- We will explain this in a bit!

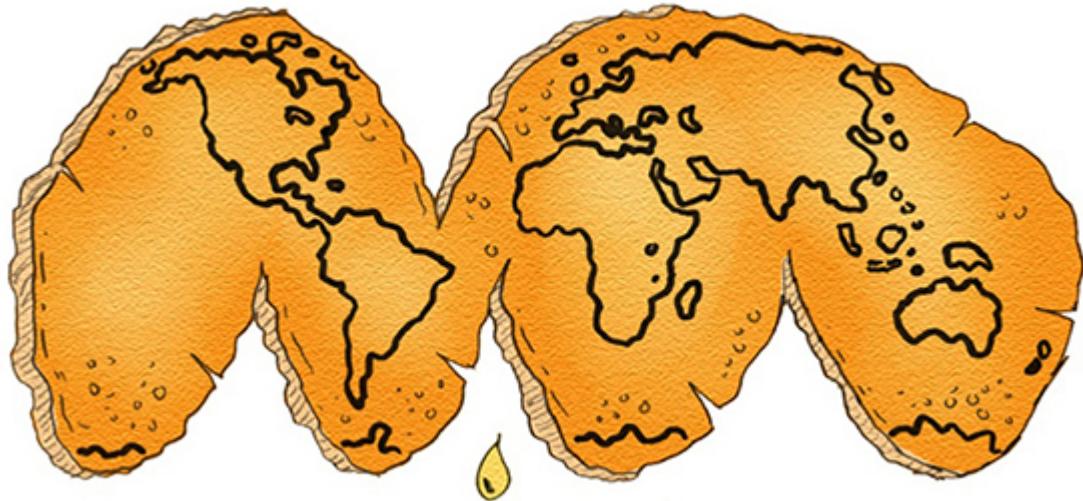

You can also access more detailed Coordinate Reference settings.

So what is a Coordinate Reference System?

Projections

- No one's favorite part of GIS
- But a necessary part of it nonetheless
- Convert points on the 3-dimensional Earth (**latitude** and **longitude**) to x and y coordinates on a 2-dimensional map

Digital Coast Geozone

Projections

- Every projection distorts some part of your map

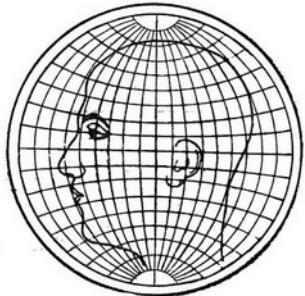

FIG. 42.—Man's head drawn on globular projection.

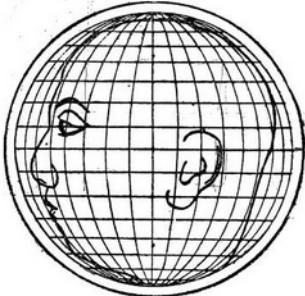

FIG. 43.—Man's head plotted on orthographic projection.

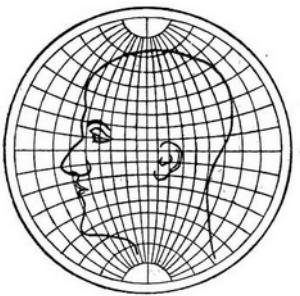

FIG. 44.—Man's head plotted on stereographic projection.

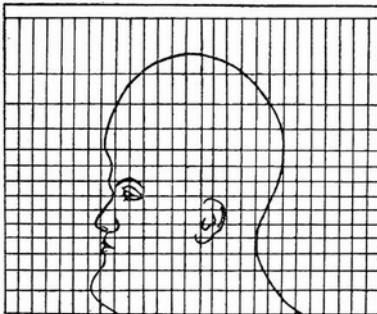

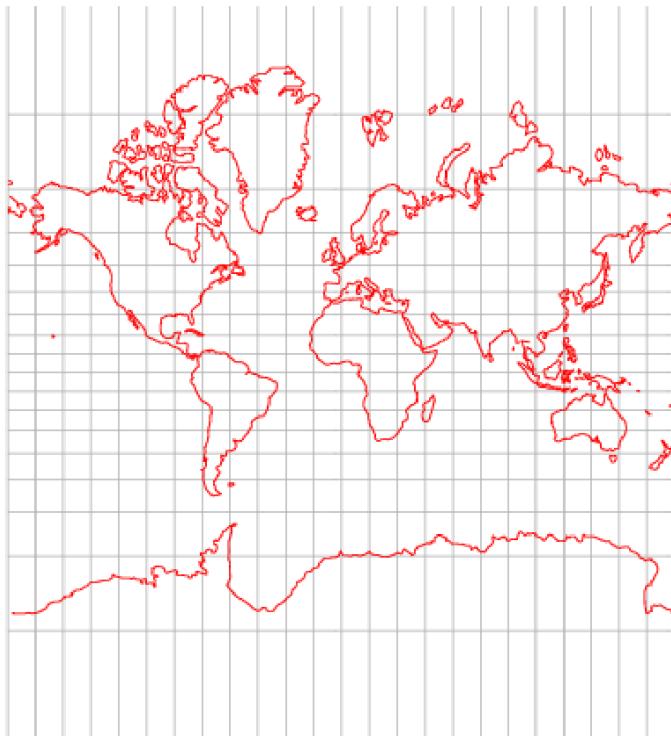

FIG. 45.—Man's head plotted on Mercator projection.

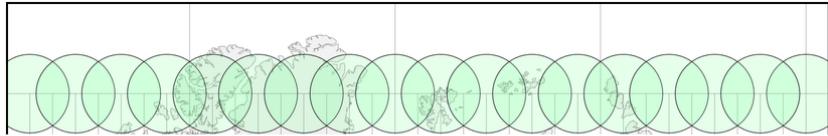

Mercator Projections

- A common map projection
- Makes geometries near poles look bigger than geometries near the equator

Projections Matter

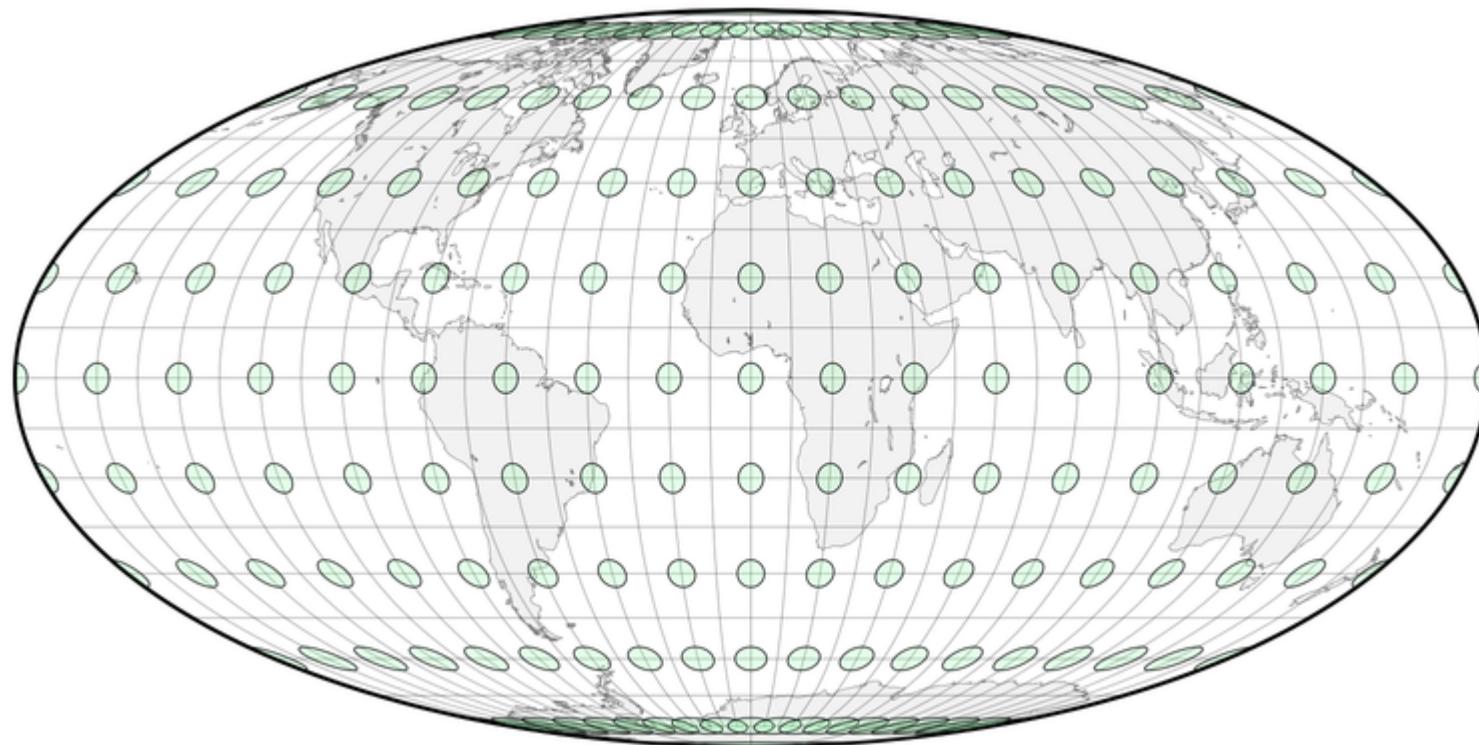

- These circles are all the same size on the globe:

Progonos

Projections Matter

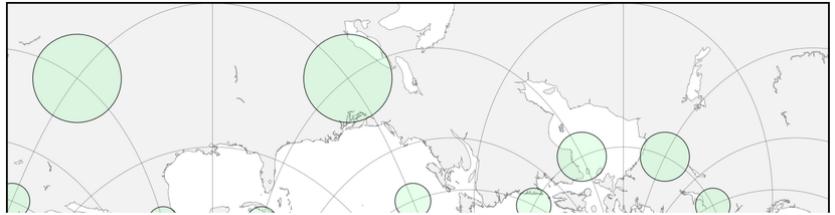

- As are these:

Progonos

Projections Matter

- And these:

Progonos

Projections Matter

Three Map Projections Centered at 39 N and 96 W

Mercator

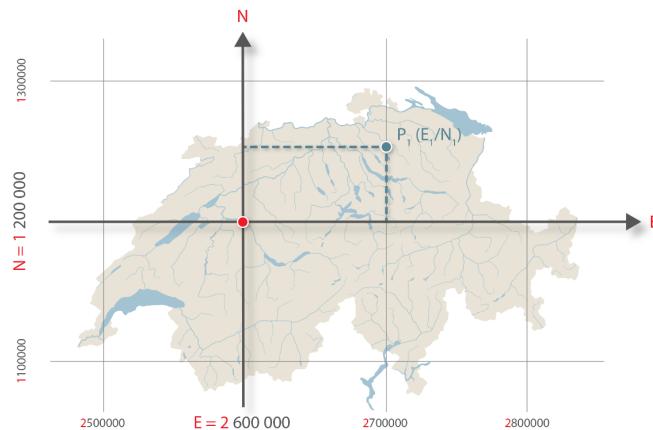

Lambert Conformal Conic

Un-Projected Latitude and Longitude

Peter H. Dana 6/23/97

Projections

- For the most part we will work in **WGS 84** (latitude and longitude)
- In Switzerland, we use a more accurate projection **CHTRS95: Swiss Terrestrial Reference System 1995** that is identical with the european system **ETRS89**.
- You might also find 'Schweizer Landeskoordinaten' (CH1903) or Landesvermessung 1903 (LV03)

Source: <https://www.swisstopo.admin.ch/de/wissen-fakten/geodäsie-vermessung/bezugsrahmen/lokal/lv95.html>

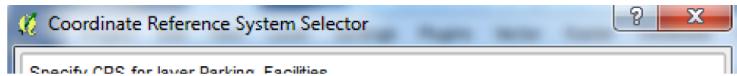

Projections

- Identified by unique IDs (**EPSG**) that make it easier to talk about them
- EPSG: European Petroleum Survey Group Geodesy (it was introduced, because Oil companies were annoyed by the incredible number of different systems)
- WGS 84 is referred to as **EPSG:4326**
- Google Maps and other online sources often uses WGS 84 / Pseudo-Mercator (**EPSG:3857**)
- CHTRS95 is referred to as **EPSG:2056**

Remember these three and you should be set

Back to Adding CSV Data

Adding CSV Data

CSV Import - Bicycle Rental

Bicycles added.

Selecting Points

Selecting Points

Selecting Points

Selecting Points - Attribute Table

Selecting Points - Saving Selection

Selecting Points - Saving Selection

- If we wanted to reproject the data into a different CRS, we could do that here
- Pick the new projection in the CRS field (like when we imported the CSV)

Installing Plugins

- QGIS has many third party functionality available
- We will use some of them in the course
- let's get some Background with QuickMapServices

Basemaps (QuickMapServices)

- Satellite imagery
- Map services
- ...
- Fast and easy way to get background maps

Setting Up QuickMapServices Plugin

- Go to the Settings Menu

Setting Up QuickMapServices Plugin

- Get the contributed packs

Setting Up QuickMapServices Plugin

- Revel in all the beautiful base maps

What We've Covered

- Adding, styling, and labeling data in QGIS
- Projections
- Selecting features
- Exporting data

Homework

- Filter for service requests in your borough
- Try and find something interesting
- Change the style of the point, either to a different shape, color, or icon
- Export your selection as a new shapefile
- Get a background map
- Send me a screenshot

Any questions?
